

# Outback S-Lite

*Affordable GPS with sub-meter accuracy.*

Add a level of precision to your operation this season with the Outback® S-Lite GPS Guidance System. At a fraction of the cost of competitive GPS Systems, the S-Lite is the affordable solution for your operation.

## Features:

### Straight Guidance

Simply selecting the "A" and "B" points, the S-Lite takes over and begins guiding on perfectly straight, parallel passes, spaced exactly the width entered during set-up. The operator can do straight passes in any order, skip some and come back, if desired. Want to leave a space between passes or adjust your line for satellite drift? Simply snap the AB line using Outback's Snap AB feature.

### Contour Guidance

For irregular shaped fields and terraces, switch to the Contour Mode and the S-Lite will provide accurate guidance from the previous pass. The S-Lite can run off multiple contours in a single field. In addition, when creating the outside pass in contour, the S-Lite will automatically calculate the perimeter area.

## Sub-Meter Accuracy

The S-Lite provides superior accuracy without the need for a subscription. Utilizing Crescent receiver technology, the S-Lite achieves sub-meter accuracy and is the ideal replacement for foam markers.

## Getting Started

It only takes a few minutes. Simply vacuum cup the console to the cab window, connect power and antenna cables, place antenna on the cab, set swath width and select guidance mode. It's that quick and simple.

## Return to Point

Need to leave the field for some reason? Just press the "Stop Guidance" button. The S-Lite saves the job and the last point. When you return to the field, the unit will guide you back to the last point and then simply resume the job.

## Exclusive Steering Guide

The Outback S-Lite features a Steering Guide that shows the proper nose

heading based upon a point well in advance of the tractor's current position. This gives the operator steering instructions "prior to" getting off track. This technology dramatically improves accuracy, reduces overlap and skip and simplifies operation.

## Multiple Applications

Utilize the S-Lite for everything from spraying to tillage. And, when you're ready to change to another tractor, combine or sprayer, the S-Lite can be moved in minutes.

## Optional ESP Coverage

The S-Lite comes with a standard one year warranty. You can upgrade to a full 2-year ESP (Extended Service Plan) for maximum protection. Contact Outback Guidance for details.

## Portability

The portable S-Lite includes everything needed to quickly install and power up the system.

## Affordability

Now you can add all of the accuracy and costs savings of precision GPS to your operation. The S-Lite is WAAS enabled with no annual subscription fees. With easy installation and set-up, the savings on inputs start the minute you turn it on.

## Expandable

The S-Lite is readily expandable for future applications. Ground Speed Interface (GSI) simulates speed and can replace radar or wheel sensors while GPS output quickly interfaces with other precision farming equipment in your operation.

## Outback Guidance

Outback Guidance is the ground agriculture brand of AgJunction, one of the leading suppliers of precision GPS for agriculture. For over a decade, our commitment to service and support has helped build a reputation you can trust. Agricultural producers worldwide count on the Outback brand to deliver innovation, performance and results.
